Thank you for purchasing our inflatable fenders!

We love to hear where our fenders go on their voyages around the world.

Let us know where you use them via Instagram, Facebook, email, phone or text (even old fashion snail mail works!)

We recommend our fenders are inflated to no more than 5 psi and suggest between 3-5 psi. You should be able to see a slight indentation when you push on the inflated fender with your finger or thumb. Our fenders use a Halkey-Roberts (HR) air valve which is standard on many inflatable boats, SUP or inflatable kayaks. We sell foot pumps if you need one.

(HR air valve)
